Mathematical Biosciences

an international journal

Volume 103 Number 1 February 1991

J. H. Swart and H. C. Murrell (Durban, South Africa)
A Model of Age-Dependent Population Dynamics Providing Simple Criteria for Growth or Extinction 1

David Abraham Kault and Lachlan McLeod Marsh (Townsville, Australia)
Modeling AIDS as a Function of Other Sexually Transmitted Disease 17

Richard E. Neapolitan (Chicago, IL)
The Principle of Interval Constraints: A Generalization of the Symmetric Dirichlet Distribution 33

Robert E. Ulanowicz (Solomons, MD) and Wilfried F. Wolff (Jülich, Germany)
Ecosystem Flow Networks: Loaded Dice? 45

James A. Cavender (Denver, CO)
Necessary Conditions for the Method of Inferring Phylogeny by Linear Invariants 69

Li-Qun Zhang, Jerry C. Collins, and Paul H. King (Nashville, TN)
Indistinguishability and Identifiability Analysis of Linear Compartmental Models 77

Calixto P. Calderón and Tor A. Kwembe (Chicago IL)
Modeling Tumor Growth 97

L. E. Harnevo and Z. Agur (Rehovot, Israel)
The Dynamics of Gene Amplification Described as a Multitype Compartmental Model and as a Branching Process 115

Chin Long Chiang (Berkeley, CA)
A True Rate of Population Growth—Lotka's Intrinsic Rate of Natural Increase Revisited 139

Book Review

Bard Ermentrout (Pittsburgh, PA)
Mathematical Biology (J. D. Murray) 153
